WAMP/XAMPP is responding very slow over localhost

FBwall *FBwall* 1,34333 gold badges1111 silver badges1515 bronze badges

3-4 minutes

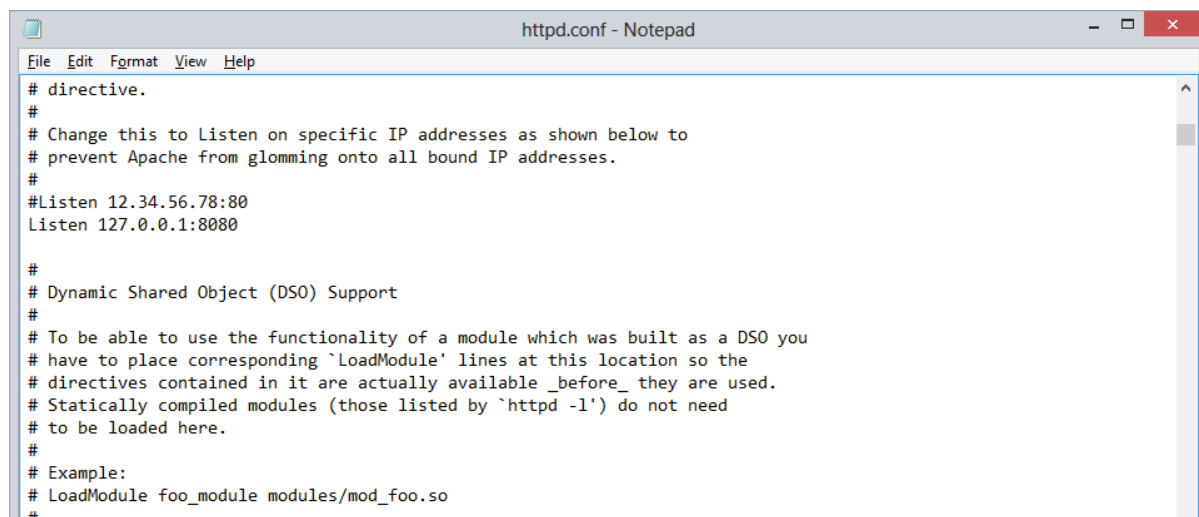

I had the same problem running on Windows 8 running on 64bit. Apache is really slow but when you press F5 many times it goes ok. In the end i after doing many things managed to solve it. Right now it works fast.

Try the following tasks to increase the performance:

Change apache's listening port

Change listening port from 80 to 8080 to avoid conflicts with programs like Skype. Open your httpd.conf file and find the line that starts with `Listen` (it's around line 62). Change it like the following:

```
Listen 127.0.0.1:8080
```

```
# directive.
#
# Change this to Listen on specific IP addresses as shown below to
# prevent Apache from glomming onto all bound IP addresses.
#
#Listen 12.34.56.78:80
Listen 127.0.0.1:8080
#
# Dynamic Shared Object (DSO) Support
#
# To be able to use the functionality of a module which was built as a DSO you
# have to place corresponding 'LoadModule' lines at this location so the
# directives contained in it are actually available _before_ they are used.
# Statically compiled modules (those listed by `httpd -l`) do not need
# to be loaded here.
#
# Example:
# LoadModule foo_module modules/mod_foo.so
#
```
